

'Styles 2011' installation instructions update.

Below is a part of chapter 3-1 Total presets and mapping information of the Styles 2011 instructions of which I have attempted to clarify some confusion that has come to light regarding 'factory' and 'user mappings'.

Ken

In **black** is what the instructions say. **In Red is what we discovered**

Installing a New Mapping?

The New Styles 2011 Package is now activated on your instrument. Would you like the corresponding Style Button Mappings to be overwritten by the new Mappings? (Re-instatement of the original Mappings or the new installation is possible at any time by going into Settings / OAS Database / Acc Button Mapping.)

Yes No

Please note: You will need to back up your own 'user' mappings before altering to the new Styles 2011 mappings as only the factory mappings are re-instated automatically when changing back to the original. (See chapter 13-1 'Data Backup' of the programmers manual)

Advice:

1. If you touch "Yes" the original factory mappings plus all of your own **user** mappings will be replaced.
2. All Presets function normally.
3. Even if you decide here to touch "Yes", you can change the Mappings back to the original factory set at any time. **You will however have to restore your own user mappings from your back-up copy.**
4. At a later time you could then change the Mappings back to the new version, and so on.
